

### *Landscape Irrigation Design Software for Irrigation Design Professionals*

Aqua Engineering, Inc. is pleased to announce the release of the **2009r2 version of Watermark Irrigation Design** software for professional irrigation designers. This release represents the culmination of almost 20 years experience creating Irrigation Design Software. Watermark ID's smart technology is still the choice for irrigation designers.

How smart can an AutoCAD drawing of an irrigation system be? Very smart if it's created with Watermark ID. Watermark ID drawings can:

- Create pipe hops automatically.
- Trim to the edge of the sprinkler or valve symbols.
- Automatically "heal" lines when a symbol is removed.
- Size Laterals by simply selecting the valve that is connected to the lateral and then Place valve designators (callouts) in the drawing during pipe sizing with the calculated flow and correct valve size already inserted.
- Know how many controller stations exist for each controller, how many are reserved for spare wires and what stations have been used.
- Create Line Source Drip laterals.
- Create densograms and calculate Distribution Uniformity and Scheduling Coefficient for rotor sprinkler layouts in the drawing.

Not only is Watermark ID smart, but it's flexible too. A few items that can be changed easily:

- Symbols.
- Layer names, colors, line types.
- Works with metric and imperial units and user defined UCS.
- Controller names, even after station assignments.

Even more important though is that Watermark ID is developed by, sold by and supported by Aqua Engineering, Inc., a highly respected, award-winning Irrigation Engineering company that uses Watermark ID every day. When you call for support you not only get someone who knows irrigation design and the program, but you get the support of a company that has been involved in the irrigation industry for 30 years.
